Installation Instructions for the Sports Retail Store Database

Overview

This document lists the files used and describes the steps taken to create the sports retail **s**tore database. The order for running the scripts is

1. Run the create script (create_tables_ retailStore_database.sql): This step will remove any previous copies of the tables you might have had.
2. Run the insert script ((insert_data_ retailStore_database.sql): This step will delete any data from the tables and then insert the data.

List of Files in the Zip File

The following is the list of the files included in the downloaded zipped file:

FILE NAME	DESCRIPTION
create_tables_ retailStore_database.sql	A script that creates the tables.
insert_data_ retailStore_database.sql	A script that populates the sports retail **s**tore database tables.
installation instructions for the retailStore database.pdf	The file you are currently reading that contains installation instructions.
the retailStore_database.pdf	This file graphically displays (the sports retail **s**tore database).

You need to study the pdf document included (the retailStore_database.pdf). The file includes the graphic for the tables.

If later in the quarter you want to get back to the original set of data, and you have not dropped any of the tables, you can just run the inserts script.
